Introduction of New **A32
for Surface Brushes**

A32 increases tool life by 10-30%.
It is a direct replacement for A31.

The raw materials and chemical composition of the A32 brush fiber are the same as the A31 brush fiber. The change from A31 to A32 is a result of a new manufacturing process that has increased the product throughput and lowered the manufacturing cost that we are sharing by lowering the brush price. The A32 is a direct replacement for the A31 that does not require a change in the Safety Data Sheet or validation testing. The part number change was required in order to track inventory and implement the lower price.

The A31 will no longer be offered as a standard effective March 2020.

EDP crossover for **A31 to **A32****
