**Introduction of New Material-
A32 for Surface Brushes**

Extends brush life at a lower price.
It is a direct replacement for A31.

We are pleased to announce a new material, A32 for surface brushes, which will replace the current A31 over time. The new material is more durable than A31 (blue) material while it has the equivalent grinding power. This added durability has resulted in increased tool life of at least 10% in testing. In addition, the price of the A32 brushes will be decreased approximately 7% to be the same as A11 (red) and A21 (white) items.

A32 is designed as a direct replacement for A31. The A32 brushes are the same standard size as the current A31 Xebec Surface Brushes. The dimensions and other specifications will not change. Customers can use the same sleeve as A31 items. The A32 bristles have a glossy appearance as a result of an revised manufacturing process.

EDP crossover for A31 to A32
